Medium	1 Sachet	Min. 4 Times	80 ml
Large	1 Sachet	Min. 4 Times	125 ml
Giants	2 Sachets	Min. 4 Times	250 ml

## RECOMMENDED FOR

\* or as directed by Veterinarian

### DIARRHOEA

Fluid loss with consequent dehydration, electrolyte loss (sodium, potassium, magnesium, chloride), and even vascular collapse sometimes occur.

### TRAVEL

They may salivate, become restless, whine, howl, bark, pace, seek your attention or physical contact and may even vomit, urinate or pass stools. Similarly, plane travel can be extremely stressful for some dogs.

### VOMITING

The vomiting of gastric or intestinal contents most commonly involves the loss of fluid that contains chloride, potassium, sodium, and bicarbonate. The sequelae of these losses include dehydration along with hyponatremia, hypochloremia, and hypokalemia.

### RECOVERY

Post-Surgery and Stress: Animals may not feel up to eating after surgery or during times of stress, but it's important to keep them hydrated.

Proper nutrition and hydration help pets heat quickly and properly.

### HOT WEATHER

Signs of heat stroke include sluggishness, unresponsiveness, a bright red tongue, thick, sticky saliva, diarrhea, and vomiting (sometimes with blood). Dehydration is another serious problem for pets that are out in the heat for a long time.

### WHELPING

Physical Activity and During Birth: Electrolytes can help support hydration levels during whelping/queening as well as during other times of high activity. Giving an electrolyte supplement helps keep the animal hydrated and provides sources of energy.

## DIRECTION FOR USE

**ENER-G-LYTE™**  
Solution Prepared by  
Mix 1 Sachet with  
500 ml of Fresh  
Clean Water,  
administered as per  
table given Quantity.

After Mixing store in  
Refrigerator for  
better chillness and  
reuse in a day.

Advised to make  
daily fresh  
preparation, discard  
balance quantity.
